RE: ECI Site Construction Management, Inc.

To Whom It May Concern:

ECI Site Construction Management, Inc. recently completed the construction of our Downtown Infrastructure Project in a very professional and expert manner. We gave them a difficult assignment:

1. Work in a way that minimizes the impact to existing Downtown businesses and residents.
2. Utilize local contractors.
3. Come up with timely, creative solutions to unforeseen problems, such as coal chutes under sidewalks and abandoned utilities.
4. Perform high quality work that will stand up to the scrutiny of the residents of Fort Morgan.
5. Provide close interaction and collaboration with the City Public Works/Utility Departments to minimize change orders.
6. Complete the project in less than 90 days.

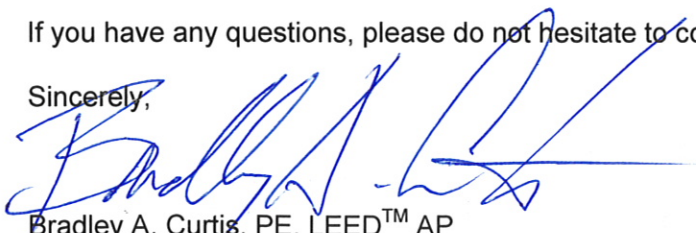

Even though Main Street was to be closed to vehicular traffic, the downtown businesses/residences were occupied and remained open during the project. ECI embraced this challenging situation with the attention and diligence needed and even had their field office situated in a vacant downtown location. ECI worked closely with the City of Fort Morgan Public Works/Utilities Departments before and during construction, adding important value engineering services, while still completing the project in less than 90 days.

ECI provided a detailed construction schedule which was adhered to as close as possible and weekly updates were provided in a timely manner so that I could relay the information to the Downtown Business Association and media on a regular basis.

The fact that ECI was able to rapidly respond, construct and provide multifaceted coordination with over 10 subcontractors and the City's utility departments in order to meet the internal and external demands of the City, is a testament to the talent and skills employed by ECI and their dedication to exceeding our expectations. Their organization of demolition and installations were on time and on schedule under almost any foreseen and unforeseen conditions. We appreciated having a partner that understood our City's needs.

If you have any questions, please do not hesitate to contact me.

Sincerely,

Bradley A. Curtis, PE, LEED™ AP
